Mobile App
v6.0

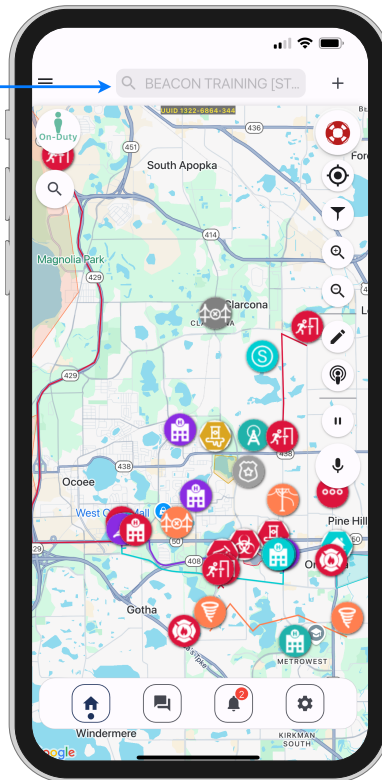

New Beacon Updates

Beacon Mobile App has a New Look

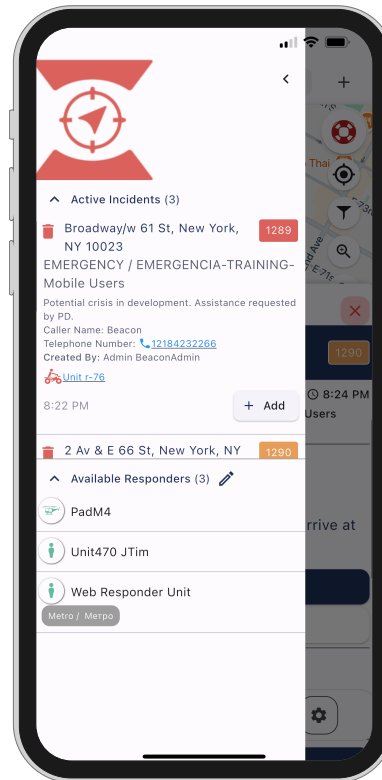

Version 6.0 brings a design update but keeps the same functionality

Home Screen

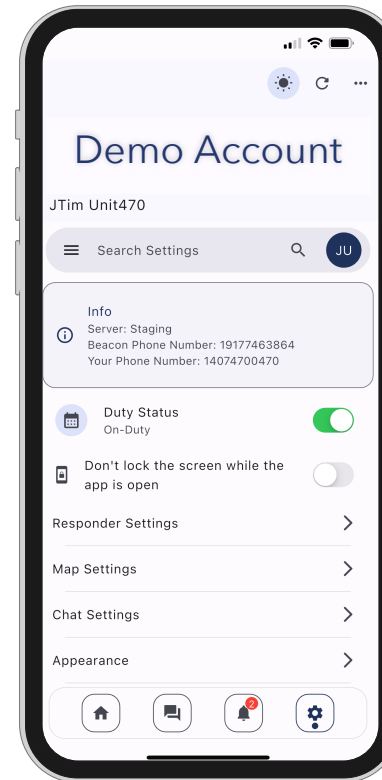

The Home Screen now includes a search bar to locate Incidents, Responders and Map Markers

Sidebar

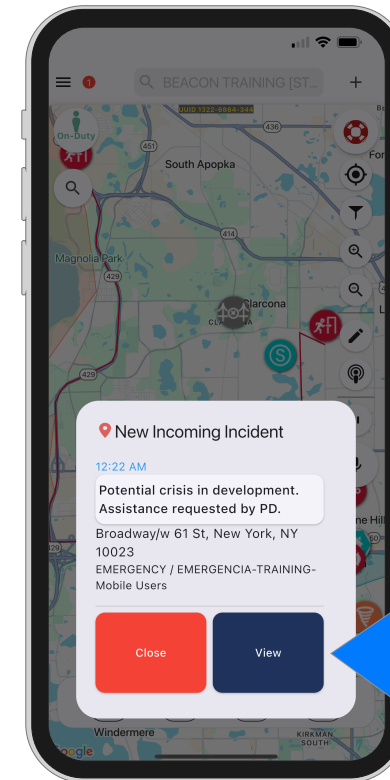

Settings

Incoming Alerts

Some Incoming Alerts dialogs now have larger action buttons

The functionality of the mobile app is not affected by the design changes.
You can visit docs.trekmedics.org for more information on how to use the mobile app and features.
(Updates to reflect the design changes will be applied to the training materials in the upcoming weeks)

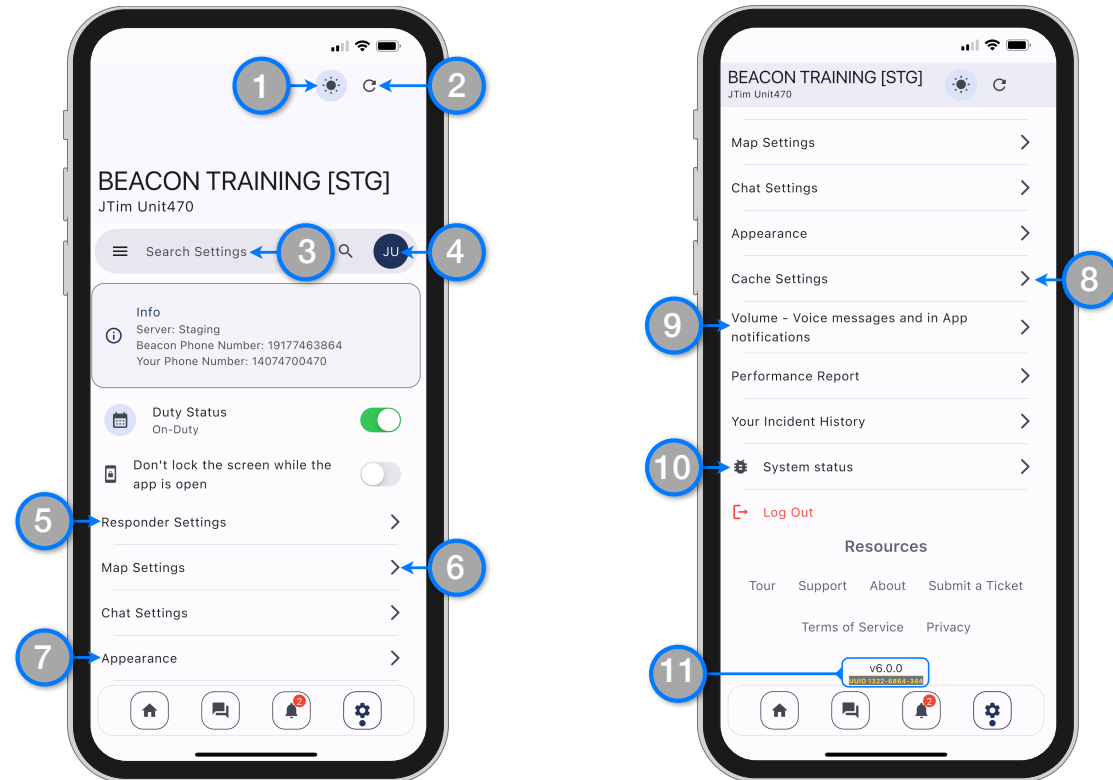

Mobile App
v6.0.0

New Beacon Updates

New Menus and Options Introduced on the Mobile App Settings Page

New in this version:

1. **Night Shift Mode** button accessible at the top of the page
2. **Settings Refresh** button to update account and Agency settings on your device
3. **Settings Search Bar** works to search deep menus
4. **Account Details** displays all information relevant to the responder account and also technical information useful for when requesting support
5. **Responder Settings** – All settings related to the responder account are now grouped here: Responder Type, Transport Mode, GPS Tracking, and more.
6. **Map Settings** – All settings related to map handling: Markers Size, Map Cache, Resolution and more.
7. **Appearance** – Includes all configurations to change how the app interface looks: Night Mode, Color Scheme, Interface Animation, Visual Density and more.
8. **Cache Settings** – Handles all cache mechanisms from this menu: Images, Map and Chats cache
9. **Volume Settings** sliders are now grouped here
10. **System Status** – Provides reference on how the system and the communications with the Beacon servers are working
11. **Beacon Version Number and Unique ID** – Useful to include when sending support requests

The functionality of the mobile app is not affected by the design changes.
